PAI Gantry Hybrid Palletizer

PAI's Gantry Hybrid Palletizer is built using Rockwell Automation's newest series of Servo CIP motion controls. **NO THIRD PARTY SOFTWARE INTERGRATION** is required. The control's logic is easy to learn and simple to demonstrate when training plant personnel. PAI's Gantry Palletizer can be programmed from the user friendly HMI. Use Rockwell's Motion Accelerator tool kit to design and build the engine behind PAI's Hybrid Palletizer. Designed with expansion in mind, the Gantry is offered with one or two heads. A two-headed system is capable of running in single or dual-head mode. The Gantry can be retrofit for existing palletizers or new installs. Contact P.A.I. for additional information.
